Andre Giaquinto — Resume for Apple ASO Program Manager

Oct 30, 2026 · @Andre

Fit review

You meet every minimum qualification on substance, but the resume as written is positioned for a Supply and Demand Planning job, not for a systems and process Program Manager role inside Apple Store Online (ASO). The screener will see forecasting, CPFR and S&OP in the first ten lines and sort you into the wrong pile. The fix is positioning and bullet selection, not new experience.

Posting requirement	Your evidence today	Read
7+ years in product, project or program management	Apple Program Manager 2025 to present, CSAM 2021 to 2025, Moura product and planning roles 2013 to 2019. About 13 years total, 9 with a PM-type title.	Meets. State the 13 years in the summary.
Contact-center or eCommerce systems: payments and financing, order maintenance, workforce management, telephony and chat	Best Buy order and delivery controls (QE process), reseller order flow and launch readiness, Amazon seller-support process (22 to 4 days, cut from the 2026 version), Moura warranty process redesign (NPS 9.7, also cut).	Partial. You have order-flow and customer-care process work, none of it in telephony, chat, payments or WFM. Restore the two cut bullets.
Influence at all levels, peer to executive	Risk escalation to senior leadership, AMR Black Friday Core Team lead, global initiatives (Springback, TWOS, NPI T+3), C-suite digital roadmap at Moura.	Strong.

Posting requirement	Your evidence today	Read
Technical BA/BS, or 11+ years in a directly related role	BBA plus STEM-designated Duke MBA. 2013 to 2026 is 13 years.	Meets through the 11+ years path. Make the start year unmissable.
Preferred: programs implementing generative AI or agentic capabilities	Metis: organization-wide LLM tool (200+ users globally); you led the Americas chapter of about 70 users through requirements, test scripts, UAT, the 2025 deployment and training. Project Sentinel (2026): a Python LightGBM shortage-prediction model you designed end to end, 85%+ accuracy, 91% on iPhone, weekly review time per analyst cut from 4 hours to 1. Demo Optimization automation (83% fewer hours per launch).	Strong. Metis is a textbook match for "integration with existing enterprise systems and workflows." Sentinel is rare for a PM profile.
Preferred: privacy, security, governance awareness	None. You confirmed no such review took place.	Gap. Do not manufacture one. Be ready to talk through data handling in Metis and Sentinel in the interview.
Preferred: hands-on interface between business and technical teams	BANDIT development, Metis, Demo Optimization automation, neural-network forecast system at Moura, Python, SQL, R.	Good. Needs requirement, build and test verbs, not planning verbs.
Preferred: upstream and downstream systems thinking	Forecast lock through sell-through ramp, reverse logistics, inventory systems.	Strong.

Overall: a good fit with one real domain gap. Apple Store Online runs customer and contact-center systems. Your Apple work is Reseller Operations, a sibling organization with different systems. The resume can close most of the distance by leading with

program delivery, process design and automation, and by naming the systems you touched. The interview will still probe whether you have shipped a change into a customer-facing or agent-facing tool, so have the Best Buy QE and Demo Optimization stories ready in requirements, testing and go-live terms.

Priority changes

The first three changes do most of the work. The rest are worth an hour.

1. **Rewrite the summary.** Drop "Supply & Demand Planning leader." Lead with program management of launches, systems and processes, the 13 years, the Apple reseller and eCommerce channel, and AI-enabled workflow automation. The posting's own words belong here: end-to-end implementation, cross-functional, requirements, automation.
2. **Rebuild the Apple Program Manager block in the posting's verbs.** Each bullet should show one of: scope definition, as-is and to-be process mapping, business and technical requirements, testing, go-live, retrospective, change management. Today the block reads as launch coordination and forecasting. Name the systems or tools behind the work.
3. **Put Project Sentinel on the page and make Demo Optimization concrete.** Metis is now written with users, requirements, UAT, deployment and training. Sentinel is your strongest hands-on technical evidence: a model you designed that predicts shortages two weeks out at 85%+ accuracy. Both are now written with year, tooling and outcome. These three bullets carry the preferred-qualifications case.
4. **Restore the two customer-care bullets you cut.** Amazon seller-support process (22 to 4 days) and the Moura warranty process redesign (real-time data, NPS 9.7). They are your only direct customer-support process evidence and this team is Customer Systems and Support.
5. **Re-angle the CSAM block from planning to process and system design.** Best Buy QE becomes a process you designed with order and delivery controls across 4 teams, held for 7 quarters. Black Friday becomes an operating cadence and risk-management system across US and Canada resellers and Telco partners. Keep the $700M quarter and 91% in-stock as outcomes, not as the subject.
6. **Spell out Reseller Operations jargon.** RO, SDM, LOG, QE, ST/SI, TWOS, AMR, CPFR, BANDIT and Metis mean nothing in ASO. "RO" is the dangerous one: in ASO it reads as Retail Online, and the hiring manager will be confused when the bullets are about resellers. Write "Reseller Operations (RO)" on first use.

7. **Cut the forecasting-only bullets.** The 94% forecast accuracy, the 11% distributor inventory reduction, and the neural-network forecast model serve the planning resume. Keep one as evidence of hands-on analytics; drop the others to make room.
8. **Replace the skills line with three labeled groups.** Program management: process mapping, business and technical requirements, UAT, change management, Scrum, Jira. Data and AI: SQL, Python, R, Power BI, Tableau, generative AI and LLM workflow automation. Platforms: Apple internal planning, order and partner-management systems, named generically. Drop SPSS, Trello and Pardot.
9. **Keep the AI story inside the Apple bullets.** No Projects section. Metis, Sentinel and Demo Optimization already make the case, and anything you cannot defend in detail would dilute it.
10. **Label "Stepping Up Class of 2024."** Outside your org nobody knows it is an Apple leadership program. Say so.
11. **Trim the passions line to a few words** or cut it. Two pages is fine for 13 years, but every line should earn its place against this posting.

Tailored draft resume

Every fact below comes from your 2020 or 2026 resumes. Bracketed items are yours to fill or confirm. Nothing else is invented. Paste it into Pages and keep your current layout.

ANDRE GIAQUINTO andre.giaquinto@gmail.com • (516) 707-4884 • Austin, TX • LinkedIn

SUMMARY Program Manager with 13 years leading cross-functional launch, systems and process programs at Apple, Amazon and Grupo Moura. At Apple, owns end-to-end launch readiness across 140+ reseller partners, led the Americas rollout of an organization-wide LLM insights tool, and designed a machine-learning model that predicts inventory shortages two weeks out. Hands-on with requirements, process mapping, workflow automation and analytics (SQL, Python, Power BI). Duke MBA, STEM-designated.

EXPERIENCE

APPLE, Austin, TX — 2021 to present

Program Manager, Reseller Operations (RO) NPI / Central Team — 2025 to present

- Led end-to-end delivery of concurrent new product introduction (NPI) programs with overlapping timelines: the full MacBook portfolio refresh, new iPhone and Mac accessories, and 10+ Beats launches (700+ SKUs) across 140+ reseller partners, from scope and forecast lock through go-live and sell-through ramp.

- Own the reseller launch-readiness process across RO, Sales, Supply and Demand Management (SDM), Logistics and channel partners: weekly status and risk reporting to senior leadership, in-flight escalation with mitigation paths, and post-launch retrospectives.
- Led the Americas chapter of the Aggregated Views workstream of Metis, an organization-wide LLM tool (200+ users globally) that reviews operating data and proposes actions: mapped business requirements and handed them to developers, validated test scripts, ran user acceptance testing, supported the 2025 deployment, and trained about 70 Americas users; now measuring analyst hours regained.
- Designed and built Project Sentinel (2026), a Python LightGBM model that flags products likely to face inventory shortages in the next two weeks across Apple's top US customers, including iPhone; 85%+ accuracy on availability projections (91% on iPhone), cutting weekly review time per analyst from 4 hours to 1.
- Automated the Demo Optimization workflow in Python, cutting hours per launch by 83% and reclaiming team capacity for NPI execution and strategic initiatives.
- Represent RO on global and regional initiatives: Springback Core Team, Americas (AMR) Reseller Logistics Matrix, NPI T+3 Execution Strategy, BANDIT (appointment escalation tool) development, and the Global Weeks-of-Supply initiative.

Channel Support Account Manager (CSAM), US Reseller Team — 2021 to 2025

- Designed and implemented Best Buy's quarter-end (QE) order and delivery control process across 4 cross-functional teams, holding zero deliveries in the restricted window for 7 consecutive quarters with 87% of deliveries in the target week; adopted as the best-in-class standard.
- Led the Americas Black Friday Core Team for 3 consecutive years and designed its management system, the processes and milestones spanning Logistics, NPI, RO and SDM, still in use today; hit 70% sell-through velocity, in line with target.
- Managed Best Buy's Mac and iPhone collaborative planning (CPFR) process end to end, achieving 91% average in-store availability for Mac, a record $700M quarter (FY23 Q1), and the lowest weeks-of-supply for iPhone families.
- Onboarded and developed 4 new CSAMs and 3 interns, designing individual development plans and supporting their ramp on NPI functions.

AMAZON, Seattle, WA — May to July 2020

Sr. Program Manager Intern, Brand Program (amazon.com)

- Improved the customer-support process for brands generating $70B+ in combined annual revenue, cutting average inquiry response time from 22 days to 4.
- Gathered requirements from 18,000 high-potential small brands through surveys and interviews, resulting in 5 feature recommendations and 1 new program.

GRUPO MOURA, Recife, Brazil — largest battery manufacturer in South America, 5,000 employees, $700M revenue

Product Manager (people manager, 5 direct reports) — 2016 to 2019

- Led the end-to-end redesign of the warranty process and system, improving customer experience and generating real-time data; NPS of 9.7 among active customers.
- Guided the Digital Transformation program: formed the cross-functional team, ran C-suite assessment sessions, and delivered a 5-year roadmap.
- Ran the S&OP process with Supply Planning, Logistics and Distribution for 55 distributors, lifting delivery performance from 87% to 95% and cutting time to customer by 4 days.
- Built a tier-1 demand forecasting system using neural networks and advanced analytics, reducing distributor inventory by 11%.
- Restructured the South America aftermarket portfolio with Logistics, Supply Planning and Sales, growing revenue 18% in 2 years.

Automotive Lubricants Product Manager (people manager) — 2015 to 2016

- Founded the lubricants business unit and led its go-to-market, reaching 124% annual growth over the first 3 years and $25M revenue in the 2-year launch; owned the unit P&L.
- Built NPI supply and demand forecasting for 55 distributors, achieving 100% fill rate and 97% customer satisfaction.

Commodities Purchase Coordinator (people manager) — 2013 to 2015

- Implemented S&OP and CPFR processes for strategic commodities, cutting the cost of premium lead by 25% over 2 years.
- Revamped the inventory management system, cutting weeks of supply 22% at the same SLA, and optimized reverse logistics across South America, recovering $700K and reaching a 100% battery return rate, an industry first.

EDUCATION

- Duke University, The Fuqua School of Business — MBA, STEM-designated (MSTeM certificate), May 2021

- Fundação Getulio Vargas (FGV) — Specialization in Finance, Controllership and Audit, May 2016
- Universidade Federal de Pernambuco (UFPE) — Bachelor of Business Administration, Dec. 2012

SKILLS

- Program management: process mapping, business and technical requirements, test-script validation and user acceptance testing, deployment and user training, change management, Scrum, Jira
- Data and AI: Python (LightGBM), SQL, R, Power BI, Tableau, LLM-based tools and workflow automation, Qualtrics
- Platforms: Apple internal planning, order and partner-management systems

ADDITIONAL

Apple Stepping Up leadership program, class of 2024. Languages: Portuguese (native), English, Spanish. Volunteer: Junior Achievement Company Program (3 years), COVID-19 Business Response Team, Raleigh, NC.

Before you submit

Your 2026 PDFs have a text-extraction problem. Both Pages exports drop every "ti", "fi", "fl" and "tt" ligature when the text is extracted by machine: "Austin" comes out as "Aus n", "execution" as "execu on", "Metis" as "Me s", "flawless" as "awless". A parser that reads the file the same way will not match "Austin", "automation", "initiative", "optimization" or "execution" as keywords. Your 2020 PDF does not have this problem. Fix: in Pages, turn off ligatures (Format, Font, Advanced Options, Ligatures: None) before exporting, or export to Word and save the PDF from there. Then open the PDF, select all, copy, paste into a plain text file and check that the words are intact.

Internal-transfer notes. Apple expects you to tell your current manager before you interview for an internal role. ASO Customer Systems and Support is a different organization from Reseller Operations, so a short conversation with the hiring manager before applying will do more for you than any bullet. Ask what systems the current project portfolio touches and name those in the Platforms line if you have used them.
